

FEATURES

Wattage
15

Connector
ML

Lifespan
50,000 hours

Certification
UL

- Compatible with standard "legacy" dimmer switches
- Preserves long life of LEDs

SA40590

DayBreak 12V 15W Dimmable Driver with 12 Port ML Block - Use this driver with ORANGE color coded products. This is a unique LED Driver that allows the user to dim their LED cabinet lighting at the same time as their overhead lighting using existing "legacy" dimmer switches. These drivers are compatible with standard Triac or ELV dimmer switches available in most DIY stores. One other great feature of the driver is because it dims on the high voltage side of the current, it preserves the long life of the LEDs it dims. Multiple drivers may be tied into the same dimmer switch allowing the whole kitchen to be dimmed off of one switch.
